WILLIAM J. BICKNELL, M. D.
COMMISSIONER

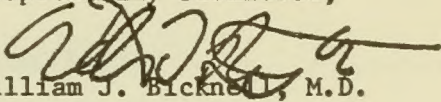

June 19, 1973

To the Honorable Senate and
House of Representatives

I have the honor to submit herewith, as required by Chapter 111, section 2, of the General Laws, the one hundred and twenty-eighth Annual Report on statistics of births, deaths, marriages, and divorces, in Massachusetts for the calendar year 1969.

In accordance with Chapter 508, Acts of 1964, this is the sixth Annual Report of Vital Statistics published by the Department of Public Health, and is intended for administrative and research purposes connected with health programs and population studies.

Respectfully submitted,

William J. Bicknell, M.D.
Commissioner

Commissioner

Annual Report
of
Vital Statistics of Massachusetts
(Births, Deaths, Marriages, and Divorces)
For the Year Ending December 31, 1969

Prepared by the
Massachusetts Department of Public Health
Office of Health Planning & Statistics
Room 328, 80 Boylston Street
Boston, Massachusetts 02116

Introduction

This is the sixth Annual Report of Vital Statistics prepared by the Department of Public Health. It tabulates Massachusetts Births, Deaths, Marriages and Divorces during the 1969 calendar year.

As in previous reports, the tabulations are based primarily on residence rather than on occurrence information. However, marriages, divorces and fetal deaths that involve Massachusetts residents and that occurred outside the Commonwealth are not included.

In 1969 a number of important changes were made in the collection and aggregation of statistics. Each of the changes is explained below in relation to the specific certificate involved.

Questions concerning these data and requests for more detailed findings should be sent to the Office of Health Planning and Statistics, Massachusetts Department of Public Health, Room 328, 80 Boylston Street, Boston, Massachusetts 02116. Telephone: Area Code 617, 727-8960

Definitions

Residence is defined as that of the deceased for a death, and that of the mother for a birth or fetal death. Residents from other states who have lived in Massachusetts for more than one year are considered residents of this state, except in those cases of deaths within resident institutions, regardless of the length of stay within the institution. Former residents of Massachusetts who have been absent more than one year are no longer considered residents of this state.

Immature birth is considered as one for which the birth weight is 2,500 grams (5 pounds 8 ounces) or less, regardless of the period of gestation.

Neonatal death is considered as the death of a child occurring during the first twenty-eight days of life.

Infant death is considered as the death of a child under one year of age.

Fetal death is the death of the product of conception prior to the complete expulsion or extraction from its mother, irrespective of the duration of the pregnancy. The death is indicated by the fact that after such expulsion or extraction the fetus does not breathe or show any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Findings in this report are for reported fetal deaths of 20 weeks gestation or more.

Underlying cause of death is defined as the disease or injury which initiated the sequence of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury. The responsibility for indicating the underlying cause of death is that of the certifying physician or medical examiner.

Population

The total population recorded in the 1965 Massachusetts interdecile census was 5,295,281 excluding student and military families residing in the Commonwealth.

The table below summarizes the trends in resident births and deaths since 1965. The rates are calculated from the 1965 census. Natural increase is the difference between births and deaths.

Resident Births, Deaths and Natural Increase
Massachusetts
1965 - 1969

Year	Births	Rate Per 1,000 Population	Deaths	Rate Per 1,000 Population	Natural Increase
1969	92,403	17	57,695	11	34,708
1968	91,761	17	58,872	11	32,889
1967	94,870	18	57,465	11	37,405
1966	97,513	18	59,301	11	38,212
1965	100,262	19	58,853	11	41,409

Births

1. A New Certificate: Chapter 358 of the Legislative Acts of 1968 of the Commonwealth of Massachusetts provides for a new multiple-copy birth certificate. One copy of the new certificate has a confidential section added to the legal section. This copy is sent directly to the Department of Public Health. The legal record includes: date of record data and place of birth, name and sex of child, names, places of birth and residences of parents, including the maiden names of mother, and occupation of father. The new confidential section contains the following additional information: race and education of both parents, previous deliveries, date of last normal menses, month of first prenatal visit, number of prenatal visits, complications, birth injuries, and congenital malformation.

2. Classification of Ethnicity: A new method of classifying ethnicity was developed in order to determine health problems faced by minority groups. This classification relies on the answers given by the mother to the birthplace and race or color questions on the birth certificate. Each pair of responses determines a unique ethnicity as shown in the following table. For example, if a mother states that she was born in Puerto Rico and that she is black, the ethnicity of her new born would be classified as Puerto Rican.

Ethnicity of Newborn as determined by Birthplace of Mother
and by Race or Color Response of Mother

Birthplace of Mother	Race or Color Response				
	White	Black	Puerto Rican	Other	Not Given
United States	U.S. born white	U.S. born black	Puerto Rican	other	unknown
Puerto Rico	Puerto Rican	Puerto Rican	Puerto Rican	other	Puerto Rican
Other	other	other	Puerto Rican	other	unknown
Not Given	other	other	Puerto Rican	other	unknown

Deaths

Approximately every decade the World Health Organization revises the International Classification of Diseases; and 1969 was the first year in which the Eighth Revision was used in a Massachusetts Annual Statistical Report. A discussion of the major classification changes can be found in Eighth Revision International Classification of Diseases, Adapted for use in the United States (Public Health Service Publication No. 1693, United States Government Printing Office). Researchers should recall that while this new classification, by itself, may not effect major changes in findings from mortality tabulations, the rules used for assigning the underlying cause of death were also revised. Thus, if a researcher finds an unexpected change in the frequency of a specific cause of death compared with prior years, he should inquire into how much of the observed change is due to the effects of the revised classification and rules for assigning the underlying cause of death.

Marriages

There were 47,309 marriages in Massachusetts during 1969, an increase of 1,781 over 1968. There were 39,691 first marriages for both bride and groom, and 6,644 marriages occurred in June, again the most popular month for weddings.

Divorces

When a divorce is granted by a Massachusetts court there is a six-month waiting period before the divorce is finalized. Prior to 1969, divorces were reported when the court reached its decision. This resulted in over reporting when, due to a change of mind of the partners or to the death of one of them, not all divorces became final. Beginning in 1969, divorces are reported only when they are finalized. This change will undoubtedly produce more precise statistics. The following table summarizes the number of finalized divorces that occurred in each Massachusetts county in 1969.

Divorces and Annulments Granted by County
1969

	Divorces	Annulments		Divorces	Annulments
Barnstable	229	3	Hampshire	204	5
Berkshire	290	0	Middlesex	2335	35
